1  $\beta = 4$

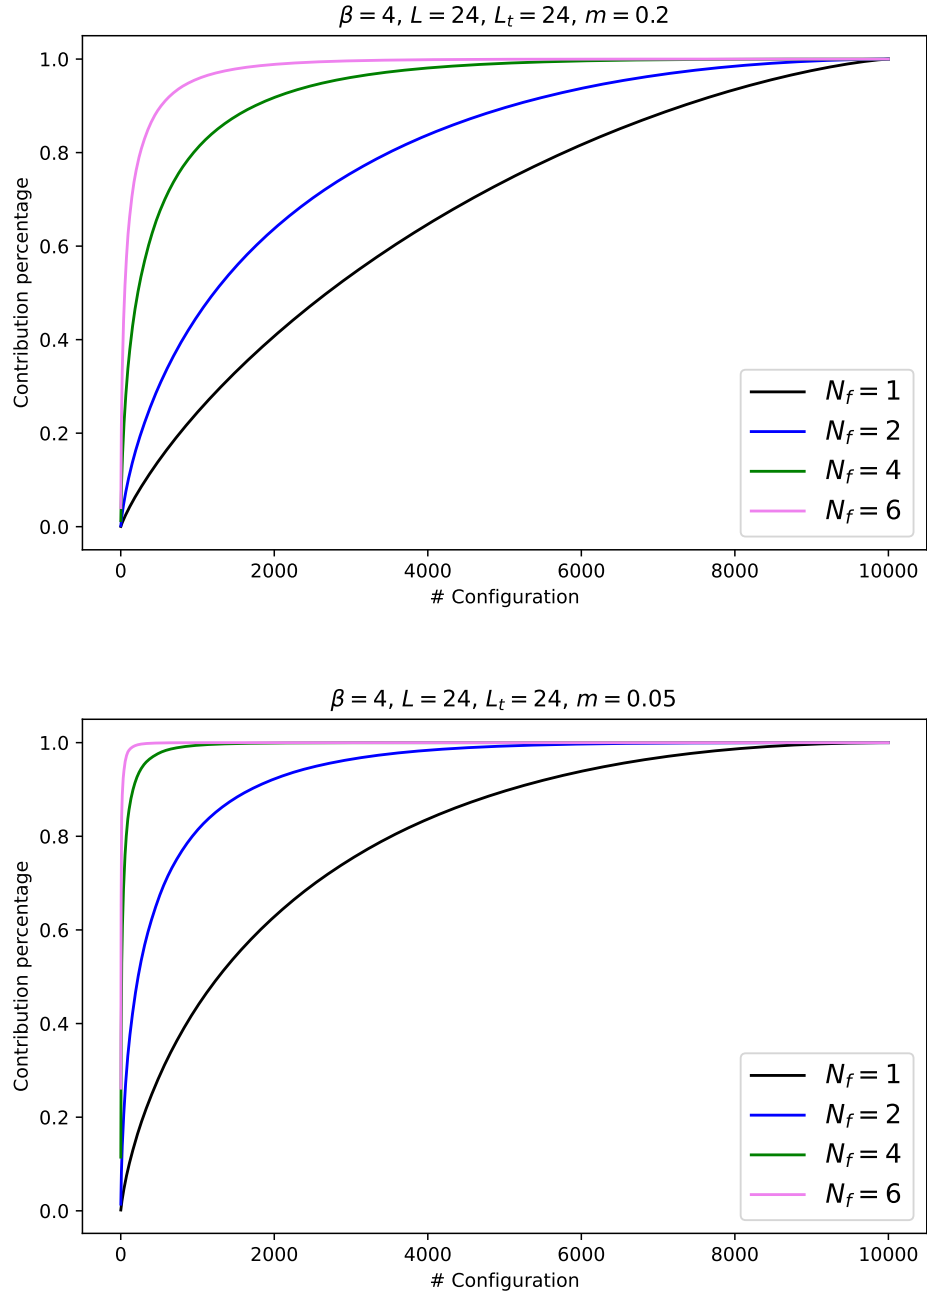

Figure 1: Cumulative plot that shows the contribution of a certain number of configurations to the final value of  $\Sigma$  for a fixed mass.

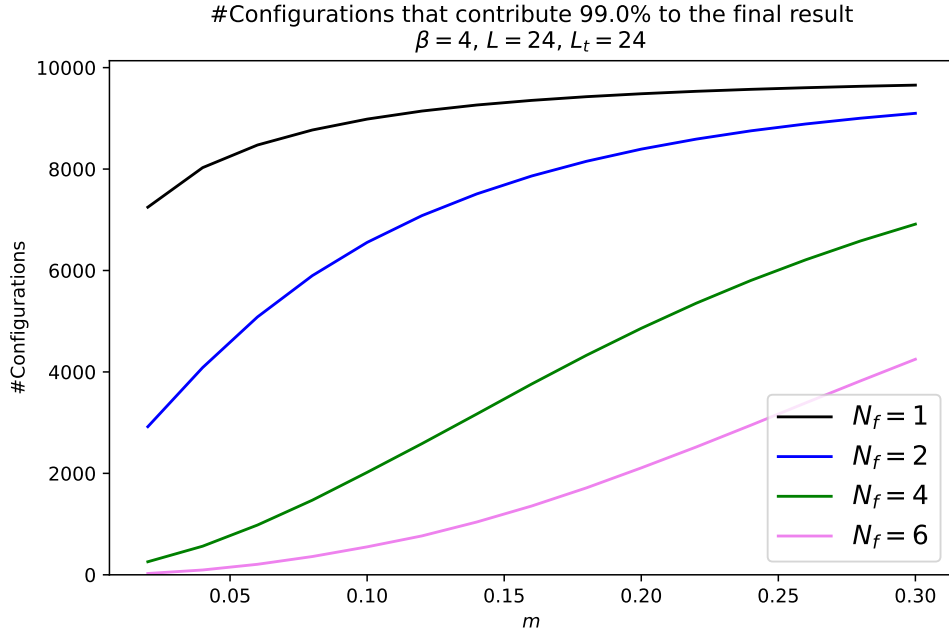

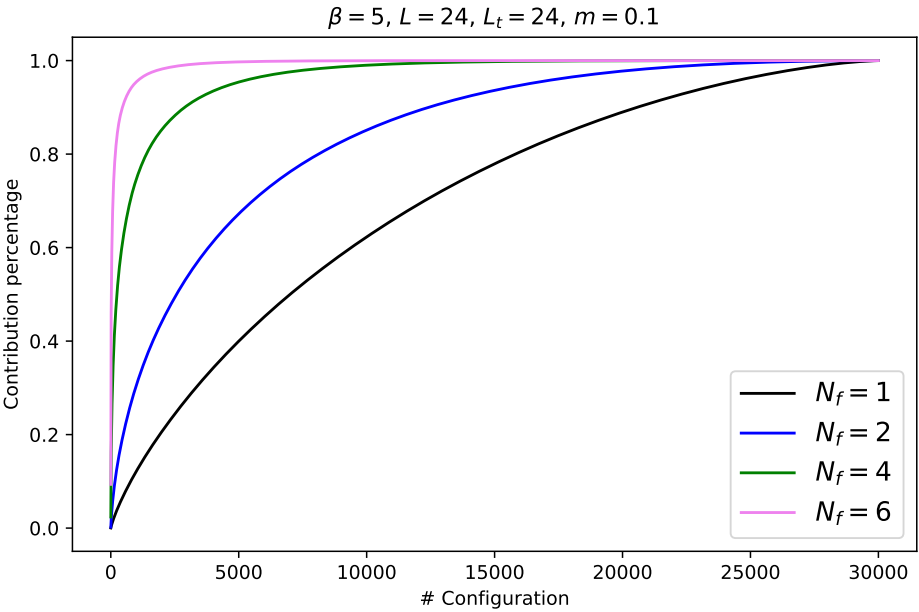

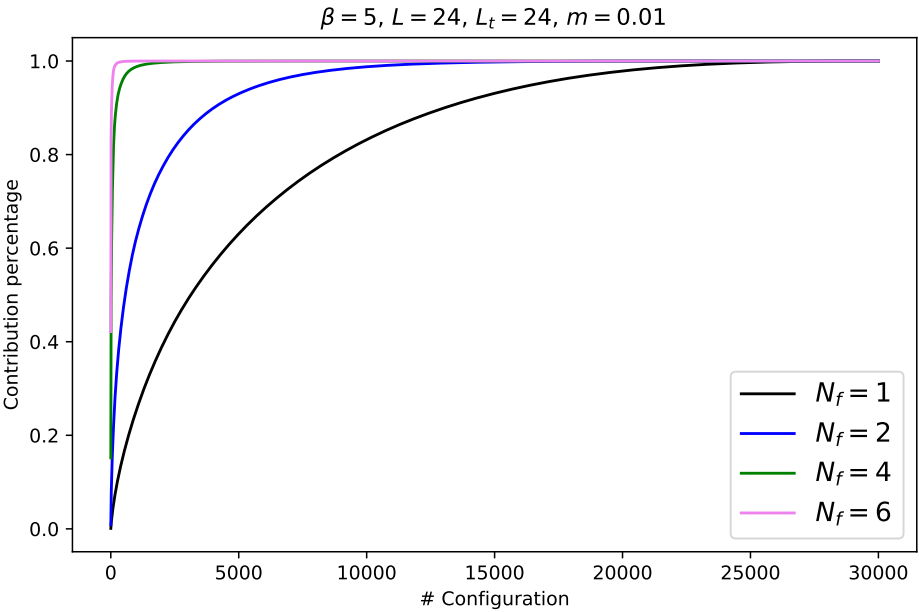

Figure 2: Number of configurations that contribute to 99% of the value of  $\Sigma$  as a function of the degenerate mass.

2     $\beta = 5$

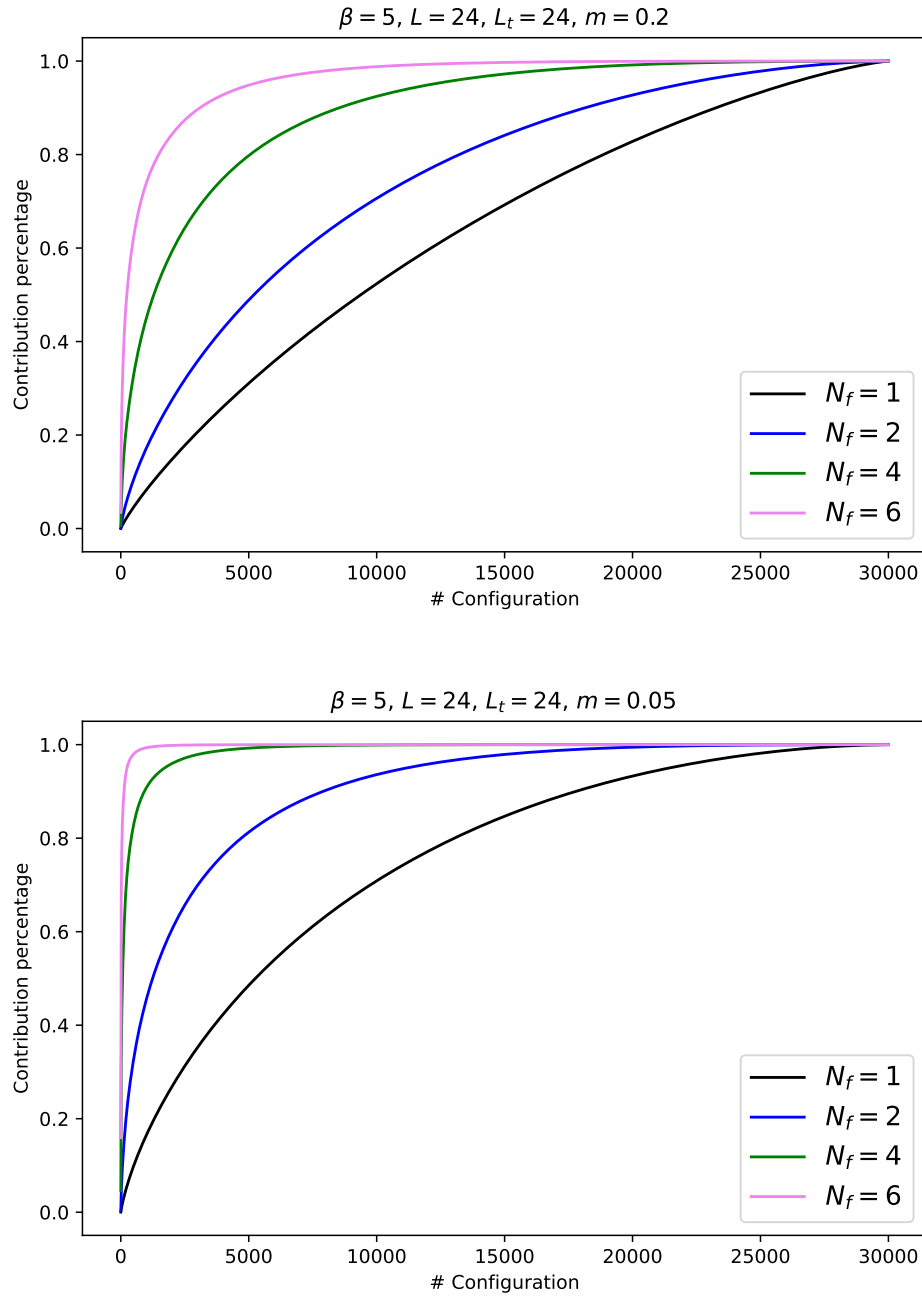

Figure 3: Cumulative plot that shows the contribution of a certain number of configurations to the final value of  $\Sigma$  for a fixed mass.

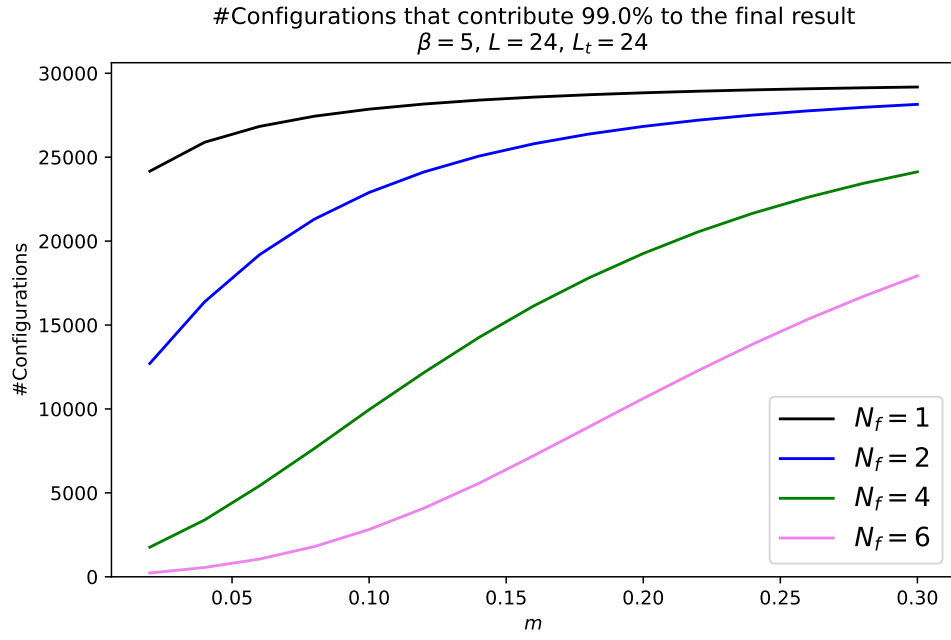

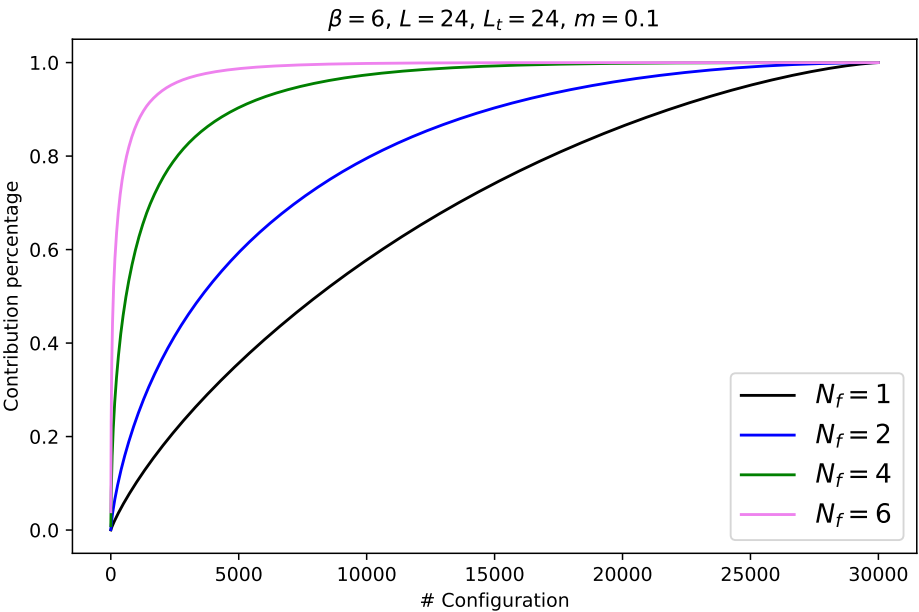

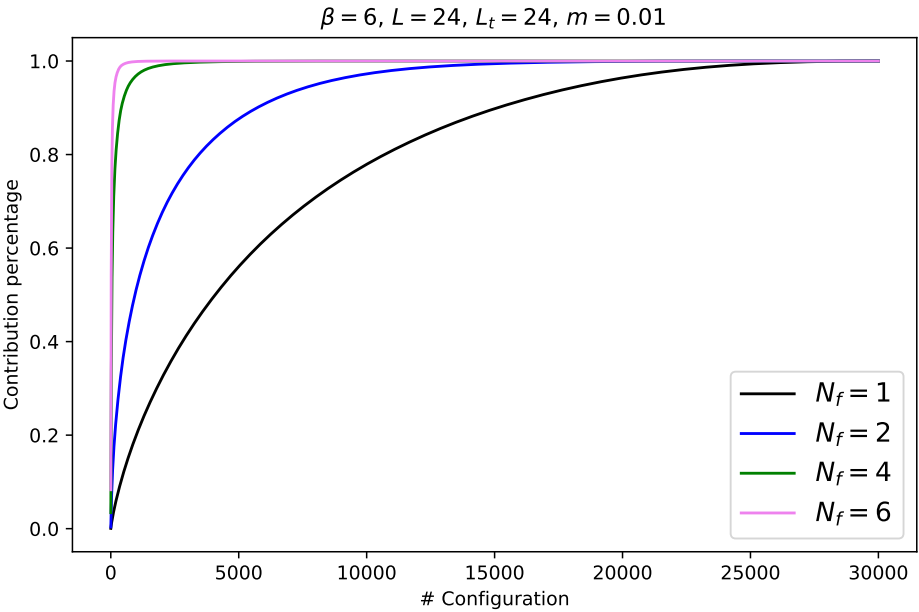

Figure 4: Number of configurations that contribute to 99% of the value of  $\Sigma$  as a function of the degenerate mass.

3  $\beta = 6$

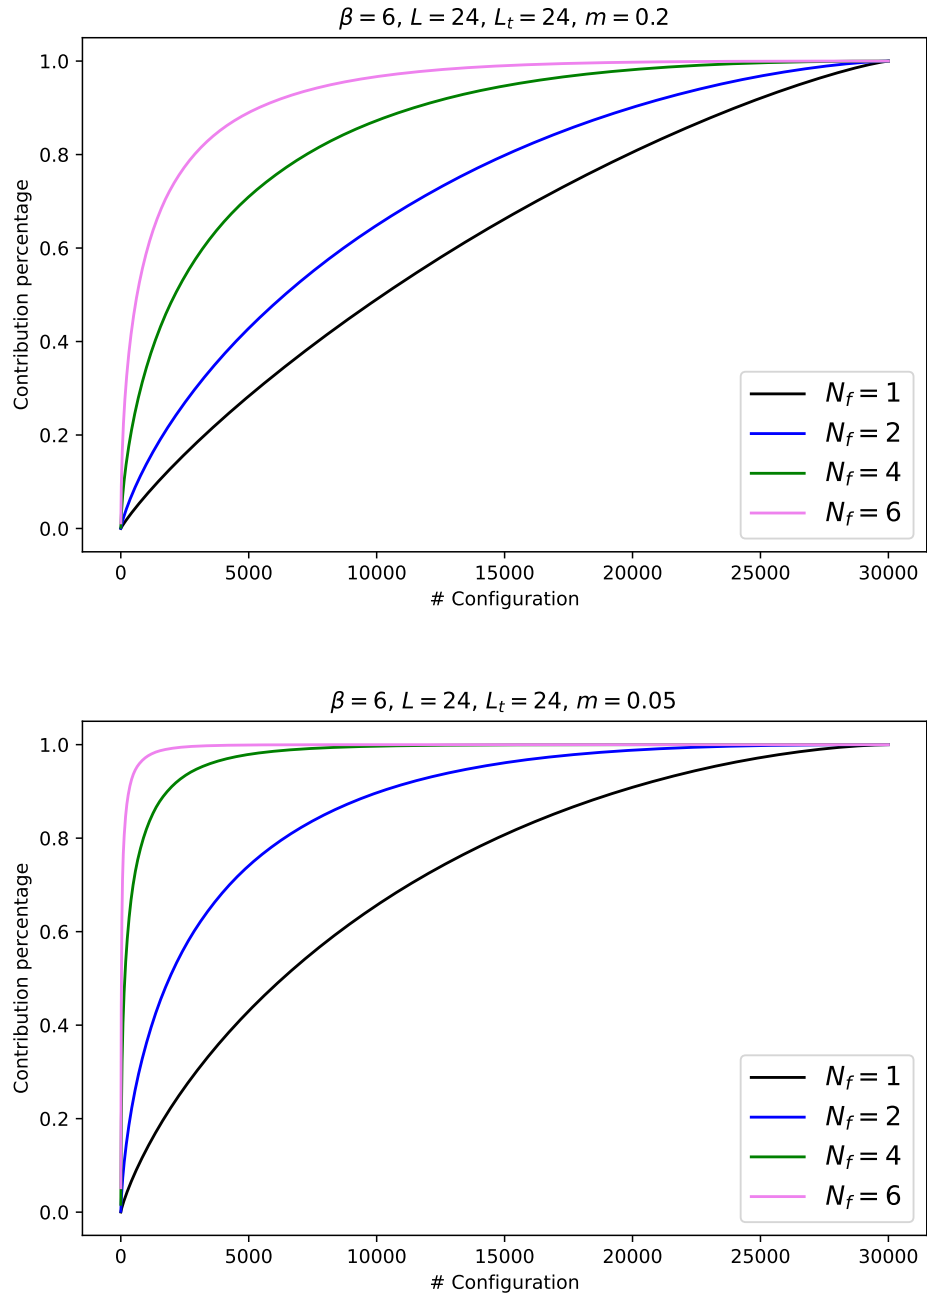

Figure 5: Cumulative plot that shows the contribution of a certain number of configurations to the final value of  $\Sigma$  for a fixed mass.

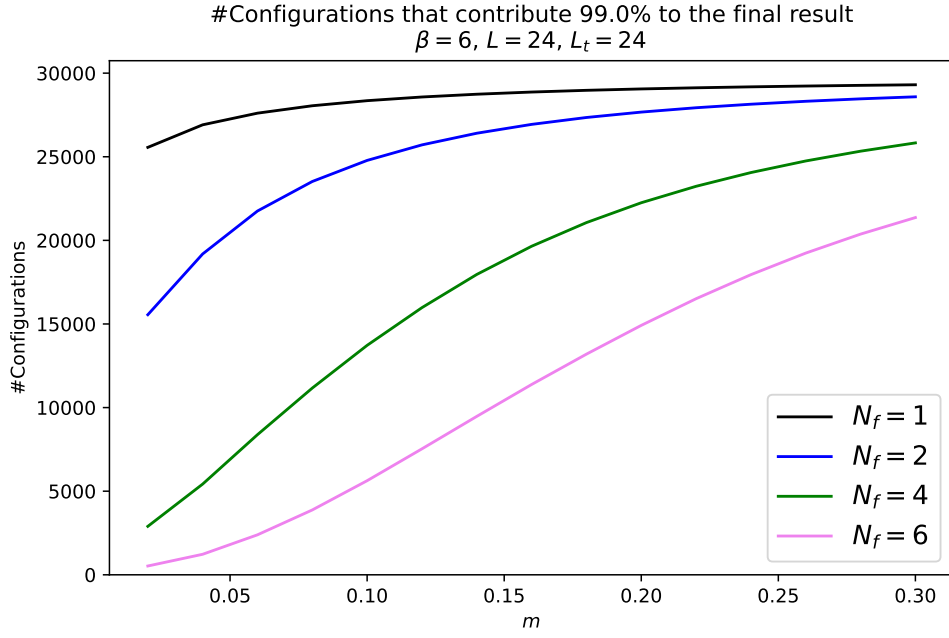

Figure 6: Number of configurations that contribute to 99% of the value of  $\Sigma$  as a function of the degenerate mass.
